

## TOOLS | SUSTAINABLE VALUE INNOVATION | SVI-ALDEHYDE MBS®

Our mission is to help enterprises to manage their sustainable development and to find the right balance between resilience, efficiency, and innovation. We give support to companies and organizations focused on sustainable strategic development, in terms of creativity, people competence enhancement, process engineering, and management innovation.

Our **Sustainable Value Innovation methodology, SVI-ALDEHYDE MBS®**, is an integrated approach based on system and design thinking, aimed at contributing to the harmony between the company's internal and external environment, people's wellness, business performance, and an overall sustainable economic and human growth.

Through Group Mentoring activities, we support the Sustainable Development Goals of the United Nations. We are solidly aligned with SDG9, aiming at encouraging innovation and upgrading industries to make them sustainable with environmentally sound management processes. Our methodology is defined by SDG8 "Promote sustained, inclusive, and sustainable economic growth", SDG12 "Ensure sustainable consumption and production patterns", and SDG17 "Strengthen the means of implementation and revitalize the global partnership for sustainable development".
